

CowboyStudio Background Support Setup Instructions

This document contains step-by-step instructions for setting up one of our background support systems. Your kit should include:

- Two (2) support stands
- Three (4) crossbar sections
- One (1) carrying case

Refer to Figure 1 for the items included in the instructional kit.

Figure 1

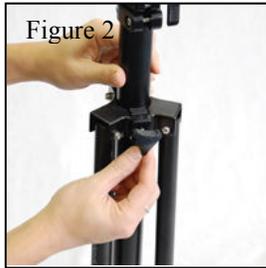

Figure 2

Figure 3

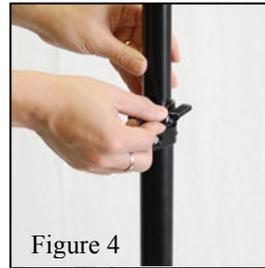

Figure 4

Figure 5

Step 1: Loosen the wing nut at the top of the support stand legs as shown in Figure 2.

Step 2: Expand the legs so that the support stand will stand up on its own as depicted in Figure 3, and then tighten the wing nut.

Step 3: Open the flip locks on the light stand joints to allow the light stand sections to move freely. Raise and lower the sections of the stand to the desired height, and close the flip locks to hold the sections in place. Refer to Figure 4 for a detailed look at these locks.

At this point, the support stand should stand on its own at you desired height, as illustrated in Figure 5. Repeat steps 1 through 3 for the second support stand.

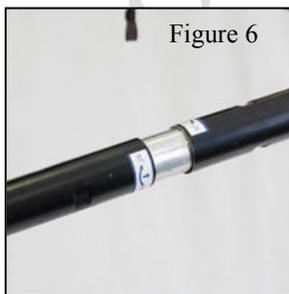

Figure 6

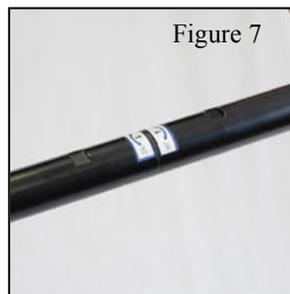

Figure 7

Step 4: Slide the silver end of a support bar section into the wider end of another support section as shown in Figure 6.

Step 5: Rotate the support bar sections until the arrows on the white labels line up. Refer to Figure 7 for details.

Repeat step 4 for the other support bar sections until you have a completed bar.

NOTE: If the arrows are not aligned properly during step 5, the background support system will not be stable.

Step 5: Remove the wing nut at the top of both support stands.

Step 6: Place the assembled crossbar onto the tops of the support stands. Refer to Figure 8 for details.

Step 7: Replace the wing nut at the top of the support stands and tighten until the crossbar is secure as shown in Figure 9.

Your background support system is now setup and ready for use.

NOTE: The addition of a backdrop to the support system will vary based on the backdrop design. In most cases, it is recommended that you slide the backdrop onto the crossbar between steps 5 and 6.
